

NUMBER: 24 DATE: December 4, 1998 x APPLICATION SERVICE

SUBJECT: “TEST MODE” on CPU-95 and CPU-2000

There has been a recent request from certain customers regarding the elimination of the “Test Mode” of the CPU-2000 and CPU-95. Deletion of the test mode has been available on the CPU-2000 from the very beginning as an option. It is now available on the CPU-95 as an option as well. Please be advised that this feature can be eliminated by replacing the “Display EPROM” with the special “S1” version in the CPU-95 Display Module or the CPU-2000 Logic Module. Please refer to the Service Manuals for the locations of these EPROM’s. The part numbers and prices for retrofits are as follows:

IGNITION MODEL	STANDARD EPROM	SPECIAL DISPLAY EPROM “NO TEST MODE”
CPU-2000	601707	601707-S1
CPU-95	601771	601771-S1

The user price for each of these EPROM’s is \$250.00 user if they are purchased for a retrofit installation

ORDERING NEW UNITS:

New units can be specified to be equipped with this Special Display EPROM at the time of ordering from Altronic. To specify units without the “TEST MODE”, simply place an “S” after the part number of the CPU-95 Display Module (791902-1S), or CPU-2000 Logic Module (291100-1S). Units designated in this manner do not have a cost adder.
