GPN1OOO and SERIES 2XXX
FIRMWARE CHANGES

The following is a list of firmware changes that have been implemented on new production GTI GPN1OOO and Series 2XXX panels effective May 17, 2010:

■ The **CONTROL** and **FAULT** relays will open on both a fault and control off condition

■ The Bi-Fuel delay timer has been modified from 60-seconds to 1-second minimum

■ The following changes have been implemented on the data logging feature:
   o The time between data snap shots has been reduced from 5-minutes to 1-minute
   o Data logs will now be retained through a power cycle of the GPN panel
   o Data logging will cease any time the Bi-Fuel is OFF, either as a result of a control set point violation or fault condition
