

GTI SERVICE NOTE

GTI 122

June 17, 2019

OPTIMUM GAS SUPPLY PRESSURE

TRADITIONAL GTI EFFECTIVE IMMEDIATELY

In an effort to conform to OEM specifications, Altronic is reducing the recommended gas supply pressure from 0.5-4 psig to a low pressure gas supply of between 0.07 and 0.7 psig (5 and 50 mbar). For optimum performance, GTI recommends a working pressure of 0.5 psig (34 mbar), with a maximum deviation of $\pm 10\%$ from the set pressure in all operating modes.

This change is reflected in all manuals.
