GTI Panels Go from Fiber Glass to Polyester

Altronic GTI is increasing customer value and reducing cost with the introduction of a new polyester panel. Polyester is a stronger material than the previously used fiber glass and is less affected by weathering. This change will take place in the GPN0100- and GPN1000-series panels.

Dimensions for the GPN1000 remain the same. The GPN0100 panel size increases to match the GPN1000.

Addition of VSM+

Altronic is also pleased to announce the addition of the VSM+ in the GPN0100 and GPN1000 series panels. The VSM+ monitors up to eight vibration sensors at once and utilizes less expensive Bosch-style sensors which replace the current Metrix-style sensor. Although the panel price will increase, the overall system price will decrease.
